

SALESPULSE BI – BUSINESS INSIGHTS DASHBOARD

PROJECT OVERVIEW

In this project, I developed a comprehensive Power BI dashboard, *SalesPulse BI*, to help a fictional retail company, **Adventure Works**, gain actionable insights from their sales data. The dashboard provides a clear, interactive view of sales performance, customer demographics, and product trends using structured Excel (CSV) datasets.

- This project simulates a real-world business scenario where a client requests insights to make data-informed decisions. Below are key business questions that were answered using the dashboard:

BUSINESS QUESTIONS & INSIGHTS

1. How is the company's overall revenue performance compared to the budget?

1. The Revenue Performance KPI visual shows total revenue, budget, and the variance—highlighting that actual sales (\$22.2M) exceeded the budget (\$21.1M), indicating positive growth.

2. Which product categories and lines are generating the most revenue?

1. A combination of donut charts and bar charts show that **Bikes** contribute over 95% of total sales, with **Mountain** and **Road bikes** as the top-performing product lines.

3. What are the top-selling individual products?

1. A ranked bar chart reveals that six variants of Mountain Bikes consistently lead in sales, each with over \$1.3M in revenue.

4. How do sales trends vary by month throughout the year?

1. The monthly line graph compares total sales vs. budget, identifying peak months (e.g., June and December) and budget overperformance.

5. Which countries and customers are driving the most revenue?

Sales by Customer Country and Customer Name visuals show that the **United States** and **Australia** lead in revenue, and individual customers like **Jordan Turner** are high-value contributors.

6. How do sales differ by customer gender?

The gender-based pie chart indicates a nearly even split, helping inform marketing and customer engagement strategies.

7. What products are currently active and in which countries?

A detailed table lists products by subcategory, sales amount, status, and country—helping in stock planning and regional targeting.
